The University of Miami brings cutting-edge research in urban planning, architecture, and engineering—in alignment with computational resources and analytical expertise—to aid in the design and development of more sustainable, livable, and resilient cities.

This conference gathers leaders in academia, professional practice, and industry to examine the Smart Cities phenomenon in relation to emerging trends and technology. The focus is on infrastructure and the built environment, as well as new potentials for business and governance.

Join us on Thursday, February 23rd, for a keynote talk by Antoine Picon (Harvard University Graduate School of Design), panel discussions, and networking. This Conference is jointly organized by the Center for Computational Science and the School of Architecture, and will be hosted in the Miami Design District at the Moore Building.

**DAY 1**
Panel Discussions
Technology and the City
Databication and the City
New Services and Experiences

**DAY 2**
Zenciti Workshop: Designing a smart city in Yucatán
(Participation is by invitation only)
